The Best Livestock Attraction (without the mess).

Maggie the Real Milking Cow™

Farm life attractions like petting zoos and livestock displays draw people of all ages as an educational and interactive experience. But, health and safety concerns and tight budgets are making these attractions more difficult for fairs, parks, and museums to offer.

Now, FiberStock, Inc. has designed the next best farm life attraction, eliminating all of the challenges with livestock displays, yet still providing an innovative educational and fun experience.

Maggie, The Real Milking Cow is a fiberglass cow with working udder that allows kids of all ages to “milk” her. All that’s needed to get Maggie working is about two gallons of water and a standard electrical outlet. The water automatically recirculates from a drain in the pail to an upper tank above Maggie’s udder.

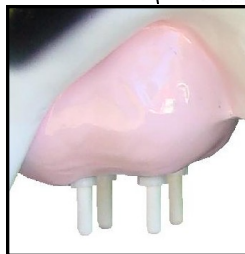

Maggie comes equipped with durable and replaceable parts. Our check-valves installed in the udder allow for immediate success for children or adults.

Access to the water supply and inner tank is made convenient with an easy to reach side panel. Simply remove the tank and pour out the water when replacing water or emptying for storage.

Our quiet recirculating, magnetic pump runs continuously, even when the bottom tank is dry. The bottom tank is easily accessed, located underneath the galvanized pail.

Operating Instructions

When you receive Maggie, just add about two gallons of water into the pail and insert the plug into a standard 110 volt outlet. The pump will turn on and help circulate the water through the hose into the upper tank inside Maggie. The check-valves installed in the tank will assist in filling the teats with water so they are ready to use. When milking Maggie, the teats will automatically refill themselves with water keeping them full at all times. Once the water is in the pail it will drain down into the bottom tank and recirculate back into the upper tank.

Specifications

Each Maggie statue is hand-painted and sealed with a clear coat that is suitable for indoor or outdoor use. She stands on a fiberglass base that has brackets attached to the bottom for easy installment. Weight is 200 pounds, measuring 90” long x 31” wide x 64” high.
